## Webinar: AI, IT and data fundamentals for non-Geeks

12 June 2024

Online

### Outline

Are you drowning in a sea of tech buzzwords? In today's fast-paced world, it seems like there's always a new term, trend, or technology to understand.

If you work in Interreg programmes, you're likely hearing a lot of jargon but might feel like you're missing the key points. This webinar is designed to cut through the noise and focus on the tech terms that actually matter—both for your professional work and your daily life.

Get ready to learn how to make technology work for you, instead of the other way around.

### Objectives

We've set aside 2.5 hours to ensure we have plenty of time for interaction and questions.

Our main focus is to introduce you to a few critical concepts that will help you navigate the rapidly evolving digital landscape. We'll cover topics that are foundational to understanding how technology is transforming organizations. You'll discover ways to harness these technologies to enhance productivity and simplify your tasks. And don't worry—there's no need for prior IT knowledge; this session is designed for everyone.

Check out the next page for a sneak peek at the concepts we'll be covering. Keep in mind that we're flexible, so the content may adapt to match your interests and questions.

We will be looking forward to sharing this journey with you and helping you gain more control over the tech in your life.

## Webinar: AI, IT and data fundamentals for non-Geeks

12 June 2024

Online
